J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

Primary and Secondary MCL = Maximum contaminant levels (MCLs), primary MCLs are health based criteria and secondary MCLs are human welfare based criteria

J = Estimated concentration below the reporting limit (RL) and above the method detection limit(MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL and the RL represents higher analytical accuracy that can be achieved by the laboratory

Shaded cells represent exceedances of the criteria

NS = Constituent was not sampled for during this month

CCC = Continuous concentration (4-day average)

CMC = Maximum concentration (1-hour average)

1. USEPA Water Quality Standards; Establishment on Numeric Criteria for Priority Toxic Pollutants for the State of California (*California Toxics Rule*]. (USEPA, 2000; 40 CFR Part 131)
2. USEPA National Recommended Water Quality Criteria, Freshwater Aquatic Life Protection (USEPA, 2006; EPA 822-H-04-001)
3. CA CFR Title 22 Drinking Water Regulations. Updated March 9, 2008.
4. Fourth Edition of the Water Quality Control Plan (Basin Plan) for the Sacramento River and San Joaquin River Basins.
5. Ammonia concentration range based on the pH and temperature measurements collected for the month during the sampling program, criteria are for when fish early life stages present (CCC) and when salmonid fish are present (CMC)
6. Dissolved metals criteria for cadmium, chromium, copper, lead, nickel, silver, and zinc are calculated using the site and time specific hardness value
7. Criteria for CTR and USEPA National ambient criteria expressed as total recoverable based on calculation using hardness for cadmium, chromium, copper, lead, nickel, silver, and zinc.
8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.

J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

Primary and Secondary MCL = Maximum contaminant levels (MCLs), primary MCLs are health based criteria and secondary MCLs are human welfare based criteria

J = Estimated concentration below the reporting limit (RL) and above the method detection limit(MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL and the RL represents higher analytical accuracy that can be achieved by the laboratory

Shaded cells represent exceedances of the criteria

NS = Constituent was not sampled for during this month

CCC = Continuous concentration (4-day average)

CMC = Maximum concentration (1-hour average)

1. USEPA Water Quality Standards; Establishment on Numeric Criteria for Priority Toxic Pollutants for the State of California (*California Toxics Rule*]. (USEPA, 2000; 40 CFR Part 131)
2. USEPA National Recommended Water Quality Criteria, Freshwater Aquatic Life Protection (USEPA, 2006; EPA 822-H-04-001)
3. CA CFR Title 22 Drinking Water Regulations. Updated March 9, 2008.
4. Fourth Edition of the Water Quality Control Plan (Basin Plan) for the Sacramento River and San Joaquin River Basins.
5. Ammonia concentration range based on the pH and temperature measurements collected for the month during the sampling program, criteria are for when fish early life stages present (CCC) and when salmonid fish are present (CMC)
6. Dissolved metals criteria for cadmium, chromium, copper, lead, nickel, silver, and zinc are calculated using the site and time specific hardness value
7. Criteria for CTR and USEPA National ambient criteria expressed as total recoverable based on calculation using hardness for cadmium, chromium, copper, lead, nickel, silver, and zinc.
8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.

J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

Primary and Secondary MCL = Maximum contaminant levels (MCLs), primary MCLs are health based criteria and secondary MCLs are human welfare based criteria

J = Estimated concentration below the reporting limit (RL) and above the method detection limit(MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL and the RL represents higher analytical accuracy that can be achieved by the laboratory

Shaded cells represent exceedances of the criteria

NS = Constituent was not sampled for during this month

CCC = Continuous concentration (4-day average)

CMC = Maximum concentration (1-hour average)

1. USEPA Water Quality Standards; Establishment on Numeric Criteria for Priority Toxic Pollutants for the State of California (*California Toxics Rule*]. (USEPA, 2000; 40 CFR Part 131)
2. USEPA National Recommended Water Quality Criteria, Freshwater Aquatic Life Protection (USEPA, 2006; EPA 822-H-04-001)
3. CA CFR Title 22 Drinking Water Regulations. Updated March 9, 2008.
4. Fourth Edition of the Water Quality Control Plan (Basin Plan) for the Sacramento River and San Joaquin River Basins.
5. Ammonia concentration range based on the pH and temperature measurements collected for the month during the sampling program, criteria are for when fish early life stages present (CCC) and when salmonid fish are present (CMC)
6. Dissolved metals criteria for cadmium, chromium, copper, lead, nickel, silver, and zinc are calculated using the site and time specific hardness value
7. Criteria for CTR and USEPA National ambient criteria expressed as total recoverable based on calculation using hardness for cadmium, chromium, copper, lead, nickel, silver, and zinc.
8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.

J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

Primary and Secondary MCL = Maximum contaminant levels (MCLs), primary MCLs are health based criteria and secondary MCLs are human welfare based criteria

J = Estimated concentration below the reporting limit (RL) and above the method detection limit(MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL and the RL represents higher analytical accuracy that can be achieved by the laboratory

Shaded cells represent exceedances of the criteria

NS = Constituent was not sampled for during this month

CCC = Continuous concentration (4-day average)

CMC = Maximum concentration (1-hour average)

1. USEPA Water Quality Standards; Establishment on Numeric Criteria for Priority Toxic Pollutants for the State of California (*California Toxics Rule*]. (USEPA, 2000; 40 CFR Part 131)
2. USEPA National Recommended Water Quality Criteria, Freshwater Aquatic Life Protection (USEPA, 2006; EPA 822-H-04-001)
3. CA CFR Title 22 Drinking Water Regulations. Updated March 9, 2008.
4. Fourth Edition of the Water Quality Control Plan (Basin Plan) for the Sacramento River and San Joaquin River Basins.
5. Ammonia concentration range based on the pH and temperature measurements collected for the month during the sampling program, criteria are for when fish early life stages present (CCC) and when salmonid fish are present (CMC)
6. Dissolved metals criteria for cadmium, chromium, copper, lead, nickel, silver, and zinc are calculated using the site and time specific hardness value
7. Criteria for CTR and USEPA National ambient criteria expressed as total recoverable based on calculation using hardness for cadmium, chromium, copper, lead, nickel, silver, and zinc.
8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.

PCBs (mg/L)	0.0		*0.014*			*0.014*			*0.5*		*0.5*			*0.00017*	0.00017

Primary and Secondary MCL = Maximum contaminant levels (MCLs), primary MCLs are health based criteria and secondary MCLs are human welfare based criteria

J = Estimated concentration below the reporting limit (RL) and above the method detection limit(MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL and the RL represents higher analytical accuracy that can be achieved by the laboratory

Shaded cells represent exceedances of the criteria

NS = Constituent was not sampled for during this month

CCC = Continuous concentration (4-day average)

CMC = Maximum concentration (1-hour average)

1. USEPA Water Quality Standards; Establishment on Numeric Criteria for Priority Toxic Pollutants for the State of California (*California Toxics Rule*]. (USEPA, 2000; 40 CFR Part 131)
2. USEPA National Recommended Water Quality Criteria, Freshwater Aquatic Life Protection (USEPA, 2006; EPA 822-H-04-001)
3. CA CFR Title 22 Drinking Water Regulations. Updated March 9, 2008.
4. Fourth Edition of the Water Quality Control Plan (Basin Plan) for the Sacramento River and San Joaquin River Basins.
5. Ammonia concentration range based on the pH and temperature measurements collected for the month during the sampling program, criteria are for when fish early life stages present (CCC) and when salmonid fish are present (CMC)
6. Dissolved metals criteria for cadmium, chromium, copper, lead, nickel, silver, and zinc are calculated using the site and time specific hardness value
7. Criteria for CTR and USEPA National ambient criteria expressed as total recoverable based on calculation using hardness for cadmium, chromium, copper, lead, nickel, silver, and zinc.
8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.

J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

Primary and Secondary MCL = Maximum contaminant levels (MCLs), primary MCLs are health based criteria and secondary MCLs are human welfare based criteria
J = Estimated concentration below the reporting limit (RL) and above the method detection limit(MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL and the RL represents higher analytical accuracy that can be achieved by the laboratory
Shaded cells represent exceedances of the criteria
NS = Constituent was not sampled for during this month
CCC = Continuous concentration (4-day average)
CMC = Maximum concentration (1-hour average)

1. USEPA Water Quality Standards; Establishment on Numeric Criteria for Priority Toxic Pollutants for the State of California (*California Toxics Rule*]. (USEPA, 2000; 40 CFR Part 131)
2. USEPA National Recommended Water Quality Criteria, Freshwater Aquatic Life Protection (USEPA, 2006; EPA 822-H-04-001)
3. CA CFR Title 22 Drinking Water Regulations. Updated March 9, 2008.
4. Fourth Edition of the Water Quality Control Plan (Basin Plan) for the Sacramento River and San Joaquin River Basins.
5. Ammonia concentration range based on the pH and temperature measurements collected for the month during the sampling program, criteria are for when fish early life stages present (CCC) and when salmonid fish are present (CMC)
6. Dissolved metals criteria for cadmium, chromium, copper, lead, nickel, silver, and zinc are calculated using the site and time specific hardness value
7. Criteria for CTR and USEPA National ambient criteria expressed as total recoverable based on calculation using hardness for cadmium, chromium, copper, lead, nickel, silver, and zinc.
8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.

J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.

Table 1. Monthly Water Quality Data Compared to Applicable Water Quality Criteria

OC4 (Old Cow Creek below Kilrac Powerhouse)	May	Flag	California Toxics Rules Criteria (USEPA) 1 Freshwater Aquatic Life Protection			USEPA National Recommended 2 Ambient Water Quality Criteria Freshwater Aquatic Life Protection			Cal Dept. of Public Health (CDPH) 3 Drinking Water Standards		USEPA Drinking Water Standards		RWQCB 4 Basin Plan Objectives	CTR (Human Health 30-day average) Sources of Drinking water	CTR (Human Health 30-day average) Other waters

5. Ammonia concentration range based on the pH and temperature measurements collected for the month during the sampling program, criteria are for when fish early life stages present (CCC) and when salmonid fish are present (CMC)
6. Dissolved metals criteria for cadmium, chromium, copper, lead, nickel, silver, and zinc are calculated using the site and time specific hardness value
7. Criteria for CTR and USEPA National ambient criteria expressed as total recoverable based on calculation using hardness for cadmium, chromium, copper, lead, nickel, silver, and zinc.
8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.

J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

Primary and Secondary MCL = Maximum contaminant levels (MCLs), primary MCLs are health based criteria and secondary MCLs are human welfare based criteria

J = Estimated concentration below the reporting limit (RL) and above the method detection limit(MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL and the RL represents higher analytical accuracy that can be achieved by the laboratory

Shaded cells represent exceedances of the criteria

NS = Constituent was not sampled for during this month

CCC = Continuous concentration (4-day average)

CMC = Maximum concentration (1-hour average)

1. USEPA Water Quality Standards; Establishment on Numeric Criteria for Priority Toxic Pollutants for the State of California (*California Toxics Rule*]. (USEPA, 2000; 40 CFR Part 131)
2. USEPA National Recommended Water Quality Criteria, Freshwater Aquatic Life Protection (USEPA, 2006; EPA 822-H-04-001)
3. CA CFR Title 22 Drinking Water Regulations. Updated March 9, 2008.
4. Fourth Edition of the Water Quality Control Plan (Basin Plan) for the Sacramento River and San Joaquin River Basins.
5. Ammonia concentration range based on the pH and temperature measurements collected for the month during the sampling program, criteria are for when fish early life stages present (CCC) and when salmonid fish are present (CMC)
6. Dissolved metals criteria for cadmium, chromium, copper, lead, nickel, silver, and zinc are calculated using the site and time specific hardness value
7. Criteria for CTR and USEPA National ambient criteria expressed as total recoverable based on calculation using hardness for cadmium, chromium, copper, lead, nickel, silver, and zinc.
8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.

J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

J = Estimated concentration below the reporting limit (RL) and above the method detection limit (MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL by the analytical laboratory.

DNQ = Detected above MDL and below RL, but not quantified (Marine Pollution Studies Laboratory). Value listed as less than the RL.

NS = Constituent not sampled for during monitoring program

< VALUE = listed as less than the MDL unless a flag (DNQ) is noted, see notes for DNQ flag

Primary and Secondary MCL = Maximum contaminant levels (MCLs), primary MCLs are health based criteria and secondary MCLs are human welfare based criteria

J = Estimated concentration below the reporting limit (RL) and above the method detection limit(MDL), the MDL is based on a statistical calculation, the RL is normally set to 5 to 10 times the MDL and the RL represents higher analytical accuracy that can be achieved by the laboratory

Shaded cells represent exceedances of the criteria

NS = Constituent was not sampled for during this month

CCC = Continuous concentration (4-day average)

CMC = Maximum concentration (1-hour average)

1. USEPA Water Quality Standards; Establishment on Numeric Criteria for Priority Toxic Pollutants for the State of California (*California Toxics Rule*]. (USEPA, 2000; 40 CFR Part 131)
2. USEPA National Recommended Water Quality Criteria, Freshwater Aquatic Life Protection (USEPA, 2006; EPA 822-H-04-001)
3. CA CFR Title 22 Drinking Water Regulations. Updated March 9, 2008.
4. Fourth Edition of the Water Quality Control Plan (Basin Plan) for the Sacramento River and San Joaquin River Basins.
5. Ammonia concentration range based on the pH and temperature measurements collected for the month during the sampling program, criteria are for when fish early life stages present (CCC) and when salmonid fish are present (CMC)
6. Dissolved metals criteria for cadmium, chromium, copper, lead, nickel, silver, and zinc are calculated using the site and time specific hardness value
7. Criteria for CTR and USEPA National ambient criteria expressed as total recoverable based on calculation using hardness for cadmium, chromium, copper, lead, nickel, silver, and zinc.
8. Criteria for total nitrate + nitrite as nitrogen (N)
9. USEPA National Ambient Criterion for chloride is for dissolved chloride associated with sodium, criterion will probably not be adequately protective when chloride is associated with potassium, calcium, or magnesium, rather than sodium
10. Fecal Coliform limit is a monthly geometric mean of < 200 / 100 mL, and no more than 10% of the monthly observations above 400 /100 mL.
